Enhanced Fuel Site Glass Bowl System

Stop leaks and prevent catastrophic failures due to cracked fuel sight glass

PowerRail, an AAR M-1003 Certified Quality Company, is pleased to offer our **Enhanced Fuel Site Glass Bowl System**.

The **E8104055PRD Seal** is designed with a complete beaded channel to prevent leaks and reduce the affects of vibration. Made of Viton®, this seal offers extended life and resistance to fuel and lube oils.

Our Enhanced **E8361381PRD Glass Bowl** is composed of a strong and more durable material. The **E8104467PRD Nylon Tipped Clevis with Torque Limiter** completes this proprietary system. Over-tightening can cause excessive stress on the sight glass and lead to cracking, while under-tightening can result in a leaky seal. The unique design of the torque limiting knob applies the ideal amount of torque each time to ensure adequate compression of the seal, and avoid excessive stress on the glass.
